Answer Sheet Report · Maths – Trigonometry Unit Test

Checked on 21 Oct 2026

Student	Class	Roll no.	Pages checked
Rohan Verma	**X – B**	**17**	**5 of 5**

28.5 / 40

71.2%

● Final · 0 questions pending teacher review

Section-wise

Section	Marks	%
A · MCQ (1 mark)	6 / 8	75%
B · 2 marks	6.5 / 8	81%
C · 3 marks	7 / 12	58%
D · 4 marks	9 / 12	75%

Where marks were lost

Calculation / algebra slip	Q10, Q19, Q17	**−4.5**
Wrong identity or ratio	Q13, Q14, Q16	**−5**
Wrong MCQ option	Q3, Q6	**−2**

Question-wise

Q	Marks	Status	Remark
Q1	1 / 1	✓ Correct	—
Q2	1 / 1	✓ Correct	—
Q3	0 / 1	✗ Wrong	Incorrect option chosen. Correct answer shown on the copy.
Q4	1 / 1	✓ Correct	—
Q5	1 / 1	✓ Correct	—
Q6	0 / 1	✗ Wrong	Incorrect option chosen. Correct answer shown on the copy.
Q7	1 / 1	✓ Correct	—
Q8	1 / 1	✓ Correct	—
Q9	2 / 2	✓ Correct	—
Q10	0.5 / 2	◐ Partial	Trigonometric values identified correctly, but $2\tan^2 45°$ was evaluated as $(2 \times 1)^2 = 4$ instead of $2 \times 1^2 = 2$.
Q11	2 / 2	✓ Correct	—
Q12	2 / 2	✓ Correct	—
Q13	1 / 3	◐ Partial	Wrote $\cos^2 A = 1 + \sin^2 A$ instead of $1 - \sin^2 A$, so the simplification after step 2 is invalid.
Q14	2.5 / 3	◐ Partial	tan θ and cosec θ are correct, but cot θ was written as 5/12; it should be 12/5.
Q15	3 / 3	✓ Correct	—
Q16	0.5 / 3	◐ Partial	Diagram and labels are correct, but cos 60° was used. AB is opposite the 60° angle, so $\sin 60° = AB/AC$ gives $L = 40\sqrt{3} \approx 69.28$ m.
Q17	2.5 / 4	◐ Partial	Incorrectly factored $\tan^3\theta - 1$. Use $a^3 - b^3 = (a - b)(a^2 + ab + b^2)$; the method up to that step is correct.
Q18	4 / 4	✓ Correct	—
Q19	2.5 / 4	◐ Partial	Algebraic error: $3x = 80 - x$ gives $4x = 80$, not $2x = 80$. Correct answer: $x = 20$ m, $h = 20\sqrt{3} \approx 34.64$ m; distances 20 m and 60 m.

Evaluator notes

No issues: all pages were readable, in order and upright. No question was mislabeled, skipped or answered twice.

Checked with a4ai AI checker. Marks may be changed by the teacher.
